## **To give is the highest display of power**

### **■ About us**

We are a unique foundation, whose aim is complex, not only financial support for talented students and recent graduates, especially in biotechnology, gene therapy and regenerative medicine. We want to simplify and accelerate this challenging journey for today's talents - the future leaders of top scientific disciplines and achieve sooner the fruits of scientific progress with an impact on human and animal health.

Unlike traditional non-profit organizations only looking for someone to donate funds, our goal is to build a true relationship with partners who care about the fate of this planet and life on it. Young scientists need more than just funding. If you share our vision and want to get more information or to directly discuss possible future cooperation, please contact us.

As a registered charity we issue certificates of monetary and non-monetary donations that can be deducted from the tax base. This benefit is available to individuals and businesses alike, not only in the Czech Republic but also from abroad. Do not hesitate to ask us, we will help you with tax optimization and structuring contribution according to your situation in a suitable timeframe. We encourage you to state your support goals so that we allocate the resources in a very specific way. We will regularly inform you about what PARTICULAR impact your support has brought, and what successes have been achieved. We will also invite you to presentations of results of research projects as well as prestigious „VIP-only“ events.

All philanthropists can expect to be offered valuable acknowledgments in the form of benefits package and attractive gifts that are unprecedented in the nonprofit sector! If you have an idea for a project that would be desirable to support, we would love to hear it.

## ■ Assistance provided

To the future leaders of top scientific fields we will offer a complete support of a reputable institution. In addition to traditional grants, such as monetary contributions for research, conferences, literature or equipment, follow scholarships to cover the cost of living, attractive internships and contacts on local and world-class departments and labs, and other top researchers. From PhD students to Nobel Prize laureates. From Prague to Mayo Clinic to Singapore.

We would be glad to help you create a real or virtual team. Increasingly, it is necessary to the success of ambitious projects to combine expertise from multiple disciplines. Growing in popularity are e.g. bioinformatics and nanotechnology.

Part of the concept is mentoring where older students guide younger; e.g. with their Bachelor's, Master's or PhD thesis, where students can try managerial work on certain projects. Long years ahead before getting this chance otherwise. Our values are solidarity and cooperation, not rivalry.

If you are working on a challenging and meaningful project or are considering such and your university, bureaucracy or lack of resources hinder you, please contact us. Or your ambitions lack adequate laboratory facilities or staffing? Get in touch. Wherever we can, we will help.

Are you interested in the idea of mentoring? We will offer you for selection young talents whom your help can change lives...

**Help those who need it!**
